Test Plan for Automation Test

Text for abstract: This is a demonstration of what a document should be. We don't need to care about what the document looks like but the content itself

1. Introduction

If this is a book, it must be a book.

This is the second paragraph, we try to see what's going on here and try to make it multiple paragraphs. The following is a literal text, that is all text between `<literal>` and `</literal>` will not be interpreted by SGML system

This is an *emphasized text*, not bad.

2. Real Meat

The following content is a demo of list and table

- This is item 1, try to make the length of an item to a long length sentence, which will oversize a normal line, normally 80 chars, to see how SGML handles it.

Test Plan for Automation Test

- This is item 2

Table 1. Test Cases

TC ID	Test Case Description	(pass/fail)	Comment
1	Installation Test This test try to check if the installation of pkg. give the command pkgadd -d /pkg/dir to test if the installation is correct		
2	Another Test		
	This is foot of Table
